

Executive Summary Template

Recommended Solution

- Implement targeted customer retention strategies for customers identified as high risk of churn, supported by ongoing monitoring of churn indicators.

Situation

- The analysis identified customer churn as an important business challenge, with customer and consumption data available to predict which customers are more likely to leave.

Complication

- The model achieved 90.39% accuracy and 82.61% precision, but recall was only 5.19%, meaning it missed many customers who actually churned

Question

- How can the client improve churn prediction and use these insights to target retention actions more effectively?
